SUMMARY

MSc Data Analytics candidate and software engineer with 3 years' experience building data-driven applications for a government infrastructure client. Hands-on with machine learning, deep learning and NLP in Python (TensorFlow, Vision Transformers), LLM applications built with LangChain, and SQL-heavy data work (SSIS, PostgreSQL, Tableau). Comfortable explaining complex technical work to non-technical stakeholders, and keen to apply AI responsibly to client challenges in compliance, risk and operational efficiency as part of EY's AI & Data team.

EDUCATION

Dublin Business School **2025 – 2026**
MSc in Data Analytics — Final grade: 68% *Dublin, Ireland*

SASTRA University **2018 – 2022**
B.Tech in Information Technology — CGPA: 7.68 / 10 (First Class with Distinction) *Tamil Nadu, India*

EXPERIENCE

Psiog Digital **Aug 2022 – Jan 2025**
Software Engineer — Proceed: Infrastructure (Government of Israel) *Chennai, India*

- Designed and developed RESTful APIs (.NET MVC) used by the Government of Israel to register and process applications from construction and energy companies.
- Wrote and optimised T-SQL scripts, triggers, views and stored procedures using recursive CTEs and cursors, significantly improving feature performance and overall user experience.
- Maintained, developed and designed the client website for 1.5 years, implementing customisations in JavaScript and object-oriented frameworks such as ExtJS.
- Implemented a Google Forms integration on Creatio for Psiog Digital.

Psiog Digital **Feb 2022 – Sep 2022**
Full Stack Engineer Trainee *Chennai, India*

- Completed a rigorous 6-month full stack development training programme.
- Built a Movie Recommendation App using C#, ASP.NET, Angular, SQL and Entity Framework.

PROJECTS

AI-Generated Face Detection with Vision Transformers & Explainable AI | *MSc research · Python, TensorFlow*

- Trained a Vision Transformer model to classify real versus AI-generated face images.
- Applied explainability techniques to show which facial regions drove each prediction, making the model's decisions transparent and auditable.

LLM Chatbot with LangChain | *Python, LangChain*

- Built a conversational assistant that uses LangChain to orchestrate LLM calls, prompt templates and conversation memory.
- Designed prompts and response handling to keep answers relevant and accurate across multi-turn conversations.

Review Sentiment Analysis | *Python, NLP*

- Developed an NLP pipeline that cleans, tokenises and vectorises customer review text, then classifies sentiment.
- Evaluated model performance and summarised sentiment trends as actionable insight for product and service decisions.

Movie Recommendation App | *Python, NLP, ML*

- Built a recommendation app that suggests films similar to a movie the user selects.
- Delivered the data layer, recommendation logic and web front end end-to-end.

Social Distance Detection in Video | *Python, Computer Vision*

- Detected people in video frames and measured distances between them to flag social-distancing breaches in real time.

TECHNICAL SKILLS

AI & Machine Learning: Deep learning (TensorFlow), Vision Transformers, Explainable AI, NLP and sentiment analysis, recommender systems, computer vision
Generative AI & LLMs: LangChain, LLM-powered chatbots, prompt engineering, conversation memory
Data & Analytics: Python, SQL (T-SQL, MySQL, PostgreSQL), SQL Server, SSIS (ETL), Tableau, data cleaning and visualisation
Software Engineering: C#, .NET MVC, RESTful API design, ExtJS, jQuery, Entity Framework

ACHIEVEMENTS

Conference Paper
Proactive Task Failure in Scientific Workflow using Set Combination in Cloud Environment

- Co-authored and presented a paper with a professor and colleagues, applying ensemble techniques to predict task failures before they occur in cloud environments.
